

Applications

From Data to Decisions: Empower Efficiency with our Vision AI Applications

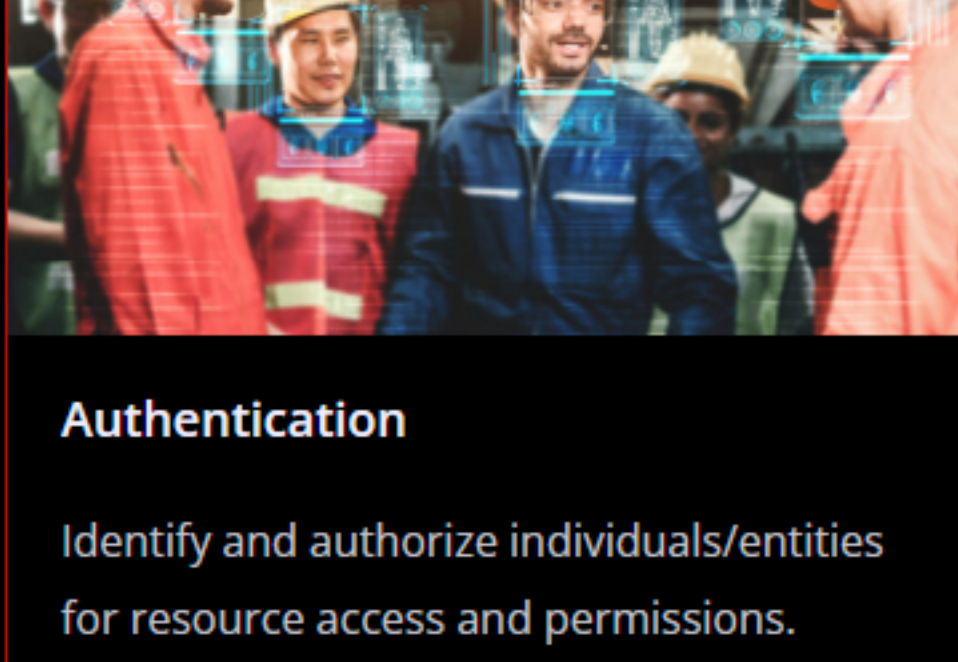

Leverage our State of Art Vision AI Applications to extract critical data for faster decisionmaking and improved productivity.

Applications

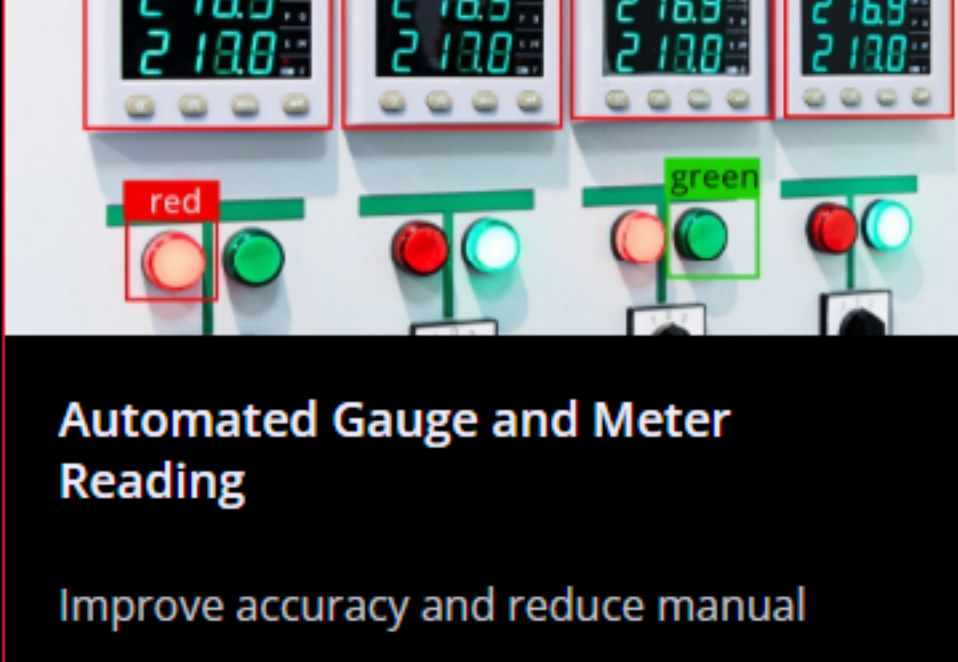

Accident detection

Detection of the occurrence of accidents on the road.

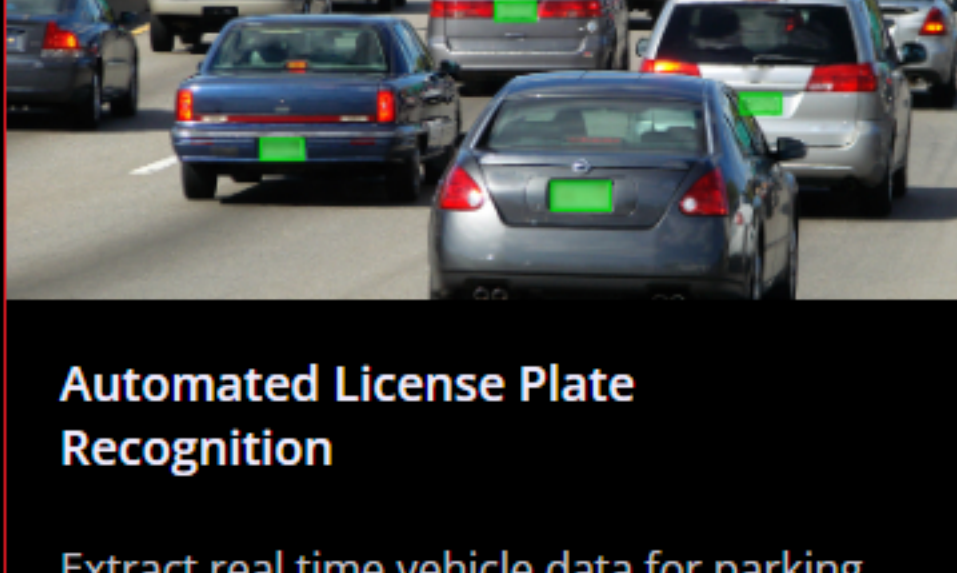

Authentication

Identify and authorize individuals/entities for resource access and permissions.

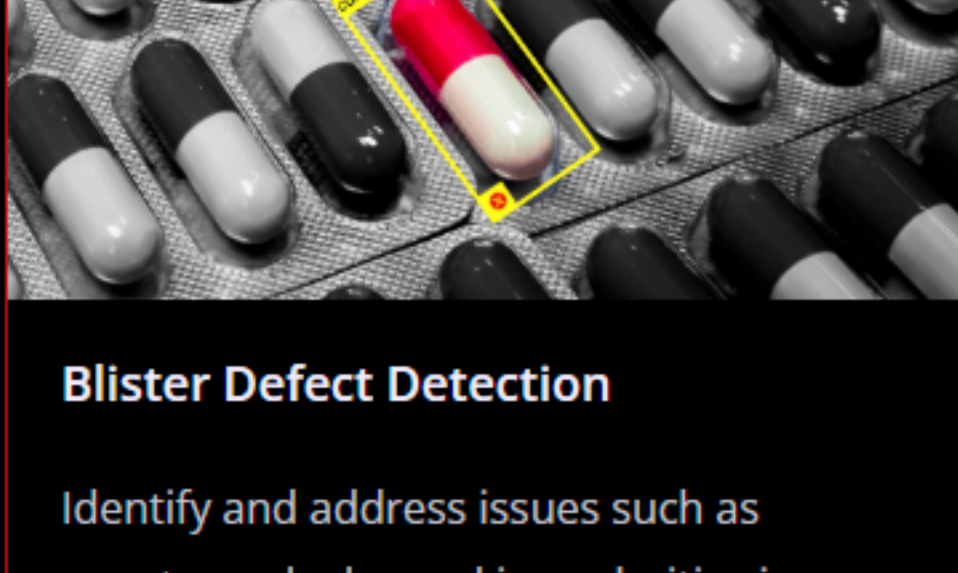

Automated Gauge and Meter Reading

Improve accuracy and reduce manual labor with automated readings of gauges and meters.

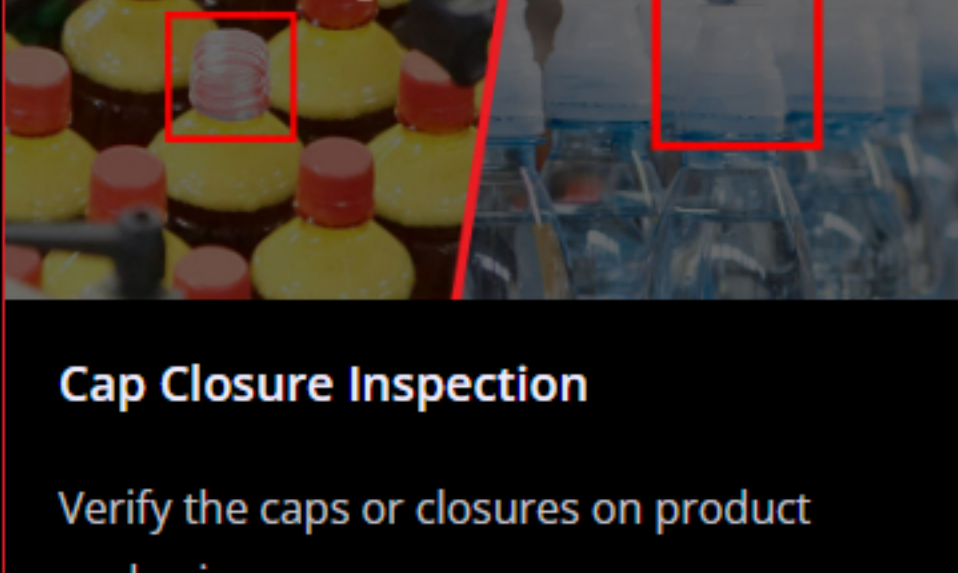

Automated License Plate Recognition

Extract real time vehicle data for parking, tolls, and monitoring traffic.

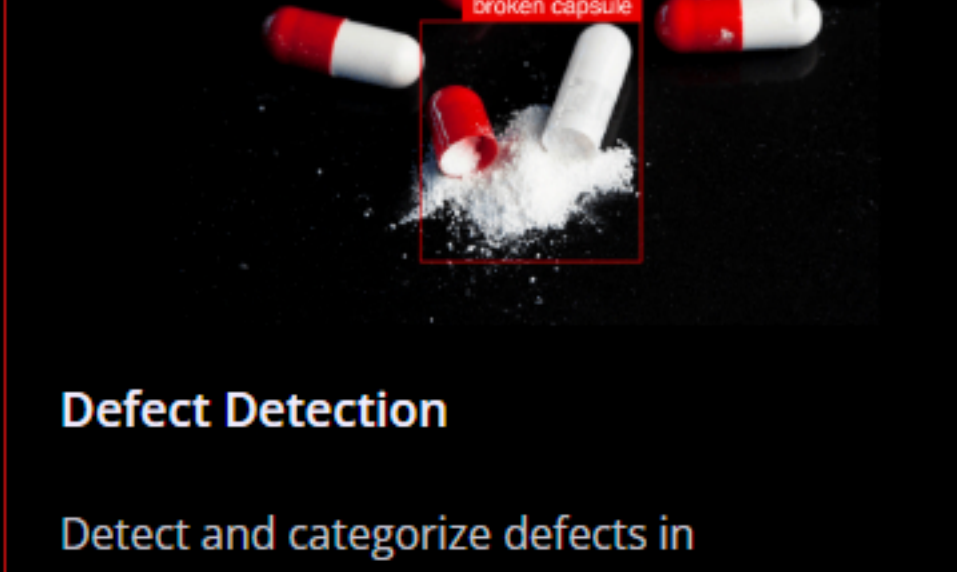

Blister Defect Detection

Identify and address issues such as punctures, leaks, and irregularities in blister packaging for pharmaceutical products.

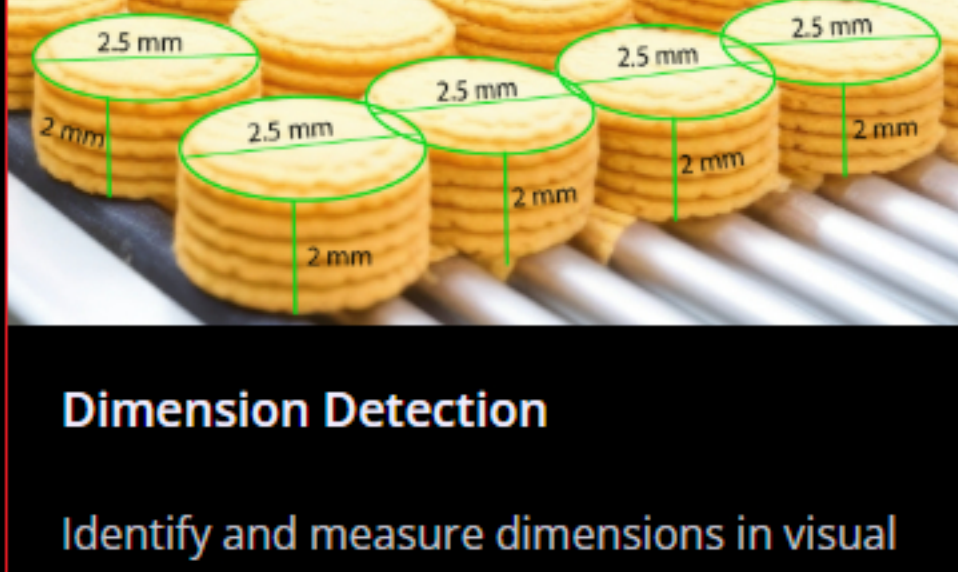

Cap Closure Inspection

Verify the caps or closures on product packaging.

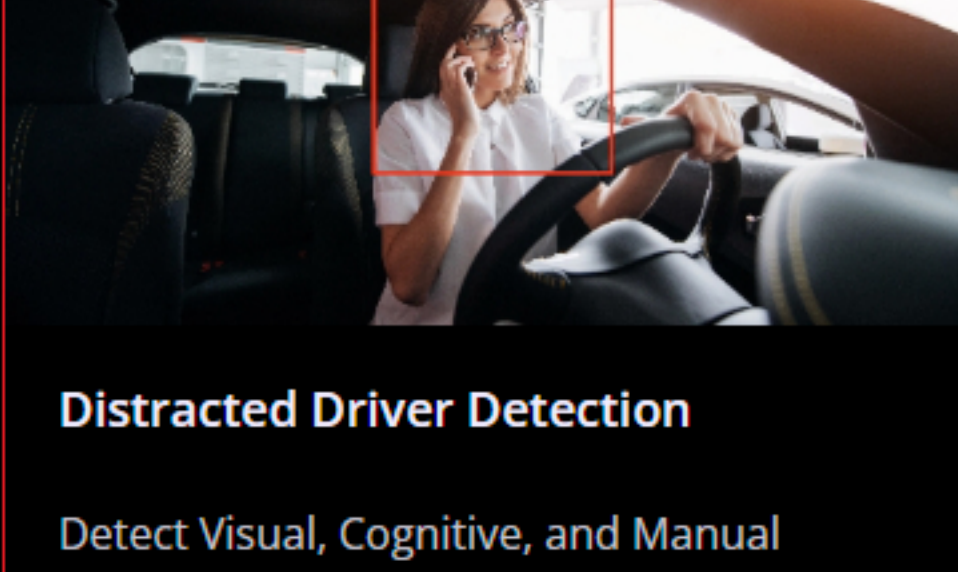

Defect Detection

Detect and categorize defects in pharmaceutical products, ensuring only high-quality items reach the market.

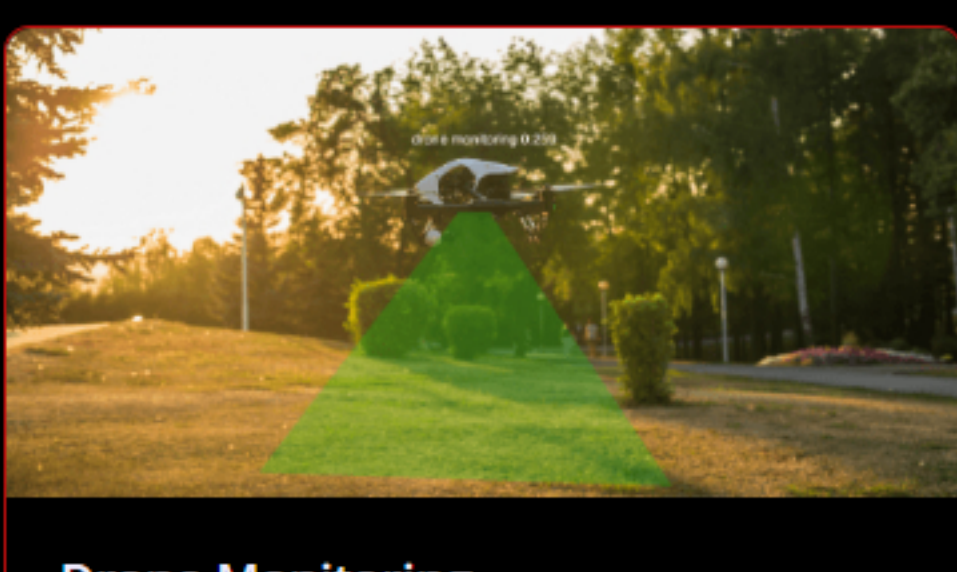

Dimension Detection

Identify and measure dimensions in visual data.

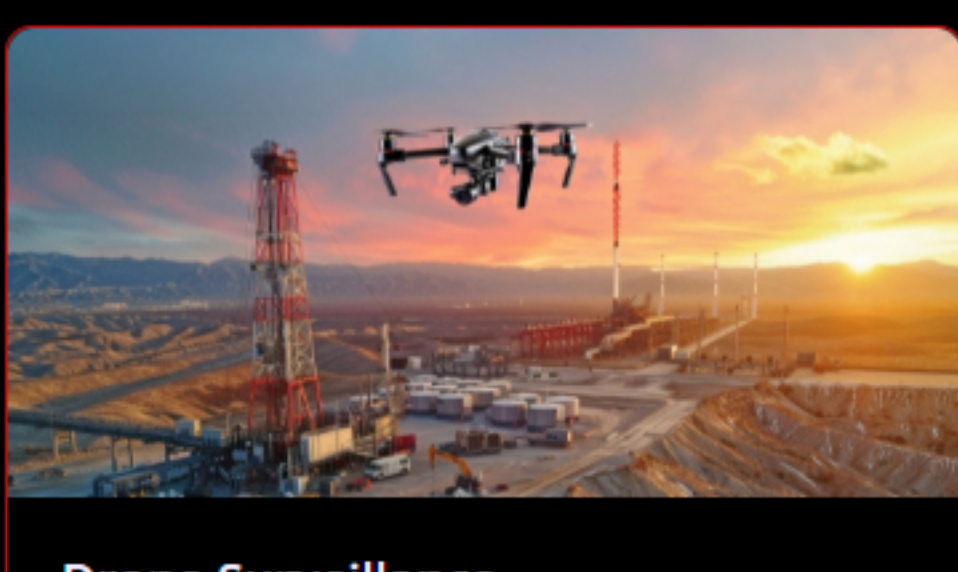

Distracted Driver Detection

Detect Visual, Cognitive, and Manual distractions.

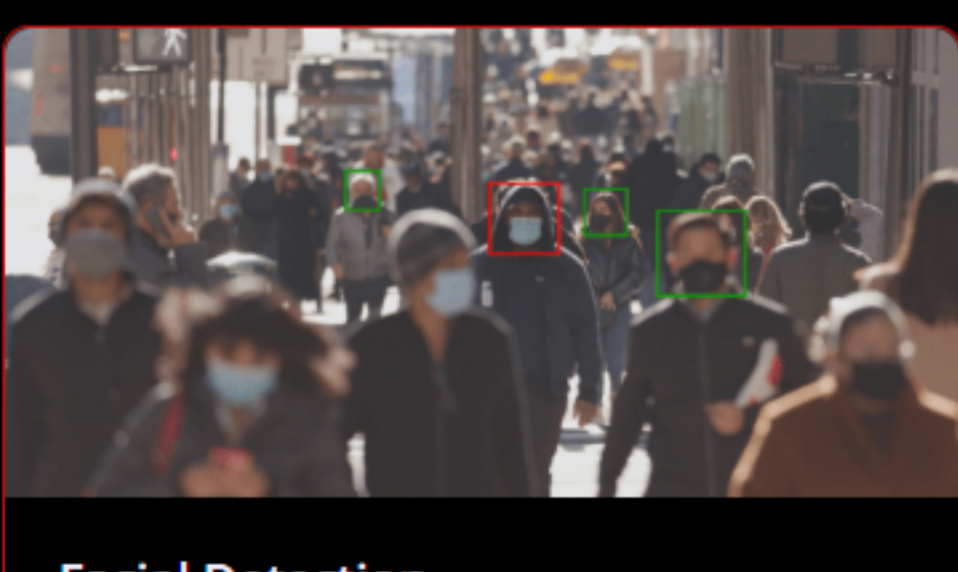

Drone Monitoring

Gather real-time visual data for enhanced security awareness.

Drone Surveillance

Drone surveillance with Computer Vision captures detailed footage for pipeline monitoring.

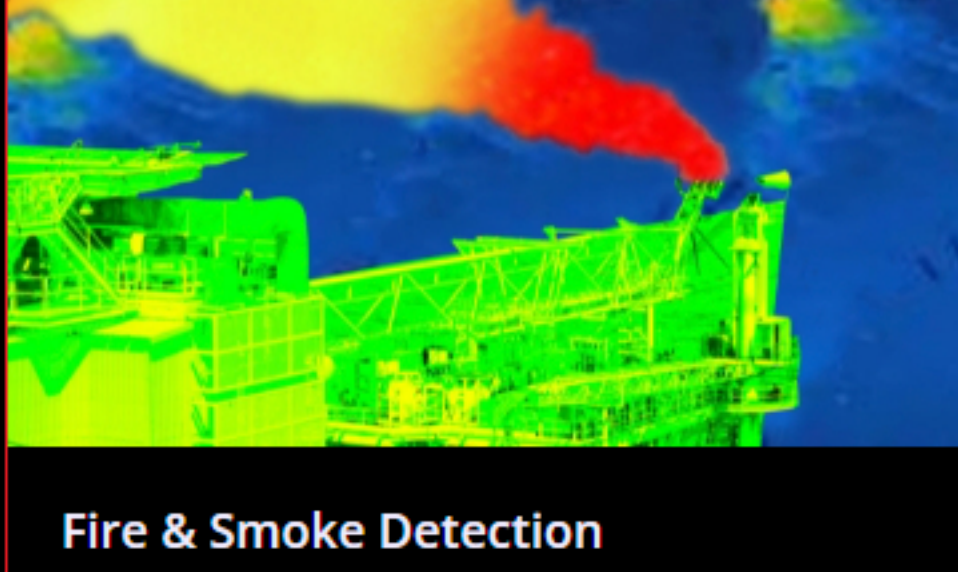

Facial Detection

Enhance security by accurately identify and verify individuals.

Fill Level Inspection

Verify and maintain the correct fill level of liquid products in bottles.

Fire & Smoke Detection

Deploy advanced detection systems to promptly identify fire and smoke, enabling quick response to potential hazards.

Foreign Object Detection

Identify contaminants and foreign particles present in bottled products.

Gesture Detection

Detect Human's hand and body movements in real-time.

Label Inspection

Scan barcodes or QR codes on product labels or packaging materials.

Object Classification

Optimize operations and manage your inventory with Automated Product Classification.

Object Detection

Automated identification and tracking of specific objects within images or videos.

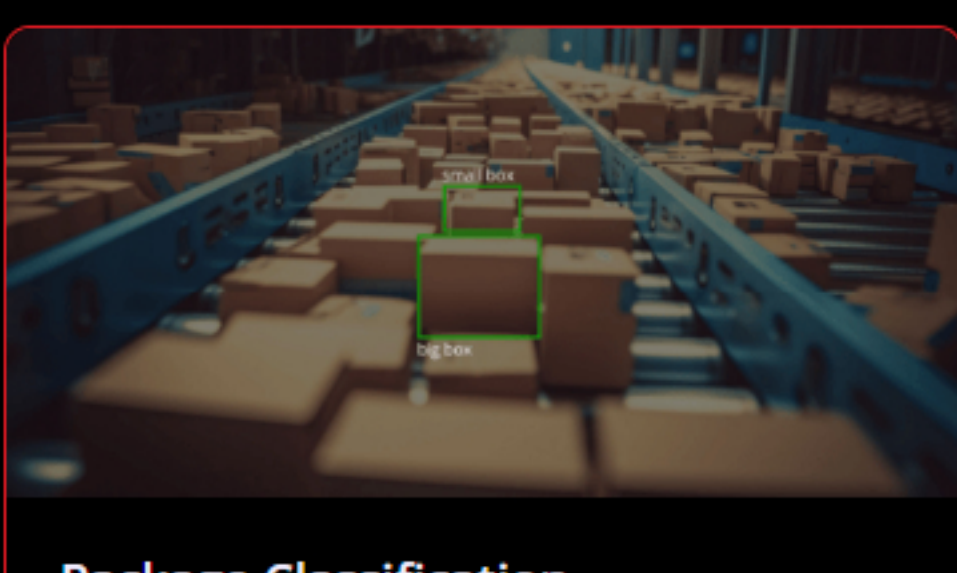

Object Localization

Enable accurate diagnosis, security, and quality control through precise analysis with object localization solutions.

Overspeeding Detection

Identify vehicles traveling at an unsafe speed on the road.

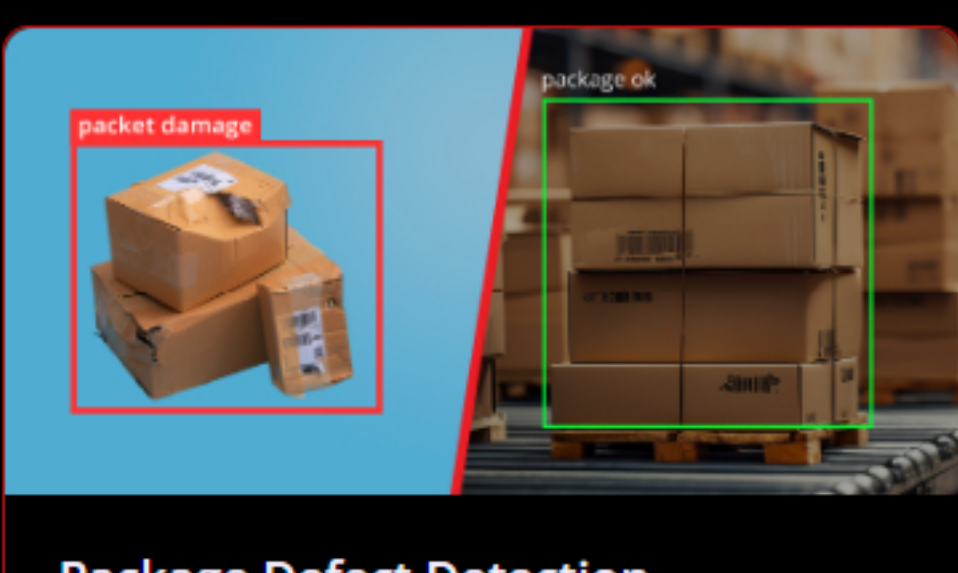

Package Classification

Categorize and identify various types of packages based on their types.

Package Counting

Determine the number of units or items in a package or container.

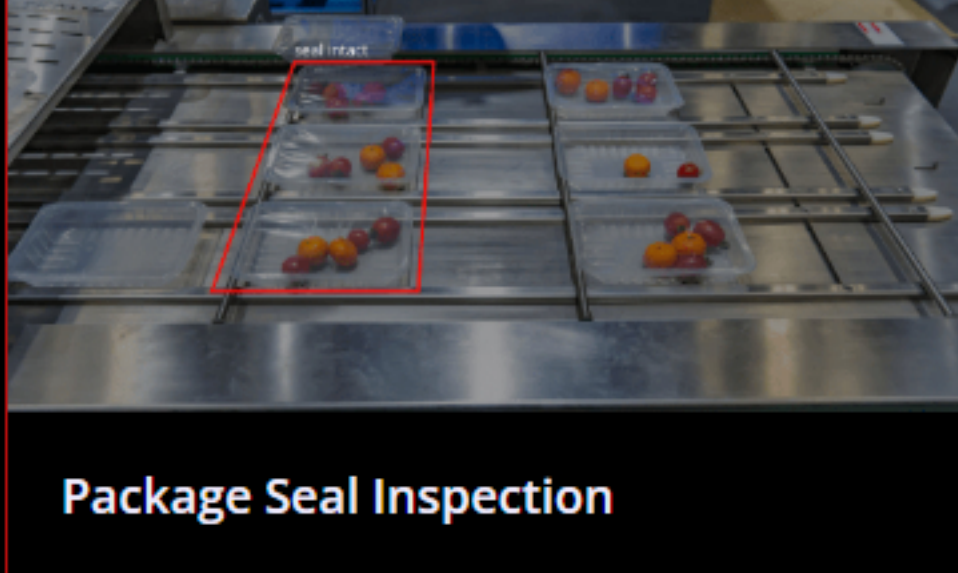

Package Defect Detection

Identify and flag unusual packets or packages during production or inspection.

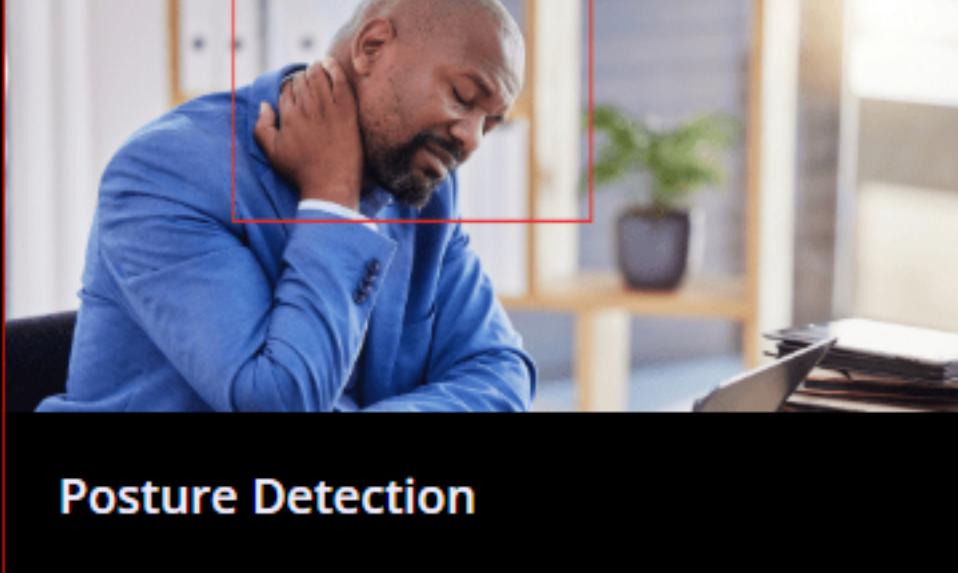

Package Inspection

Inspect the packages for tears, seals, and other issues that could compromise product quality.

Package Seal Inspection

Examine and verify the quality of seals or closures on packets or packages.

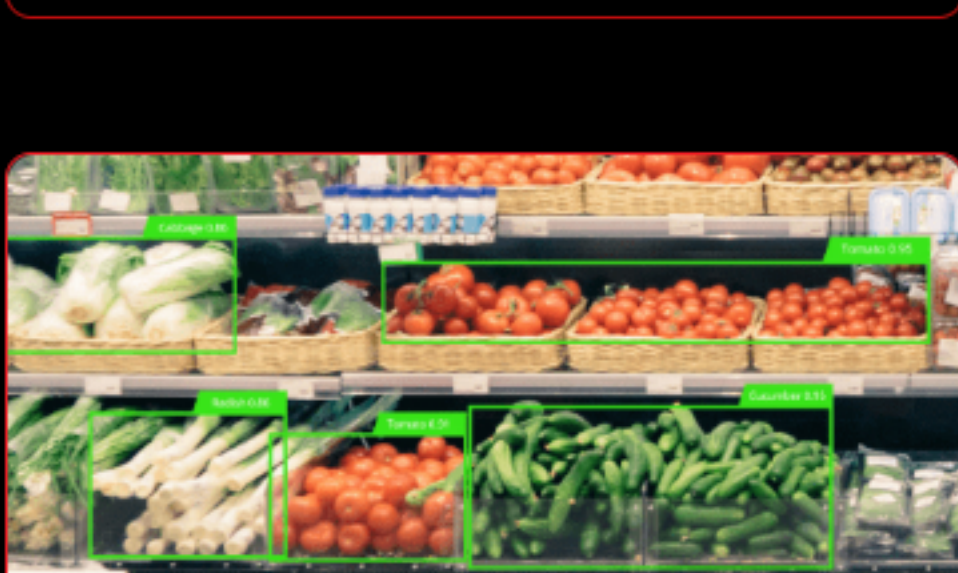

Posture Detection

Real-time monitoring and detect suspicious body movements for public safety.

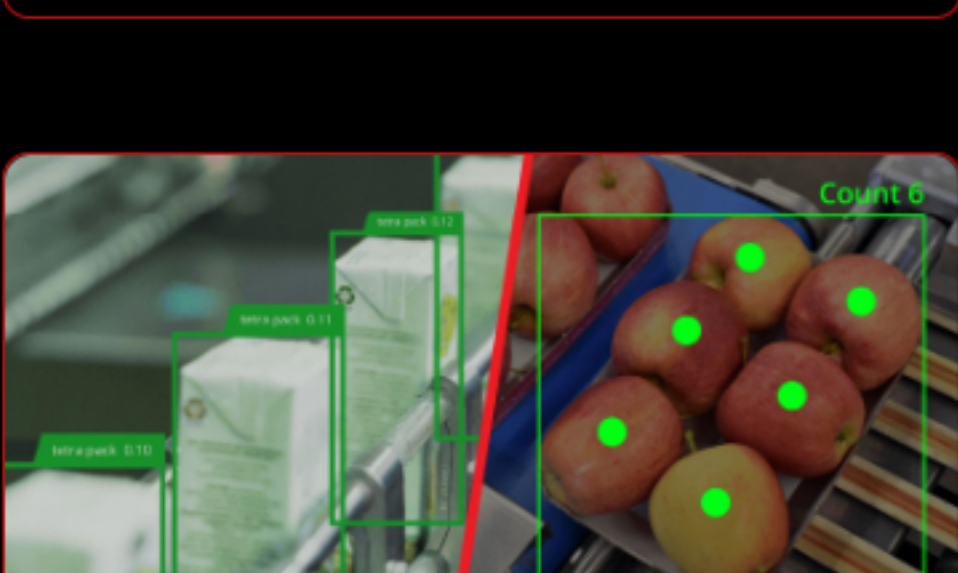

Pothole Detection

Identify and locate potholes or road surface defects.

Product Classification

Categorization and group the products based on their types.

Product Counting

Count the number of products in inventory, product line, and store shelves.

Quality Verification

Inspects, tests, and analyses and ensures packaging meets the desired standards and specifications.

Red Zone Monitoring

Keep a vigilant eye on remote operations and high-risk zones to enhance security and operational oversight

Roadblock Detection

Get live data on roadblock locations and optimize traffic flow.

Traffic Sign Detection

Detect regulatory, warning, guide and information signs on road.

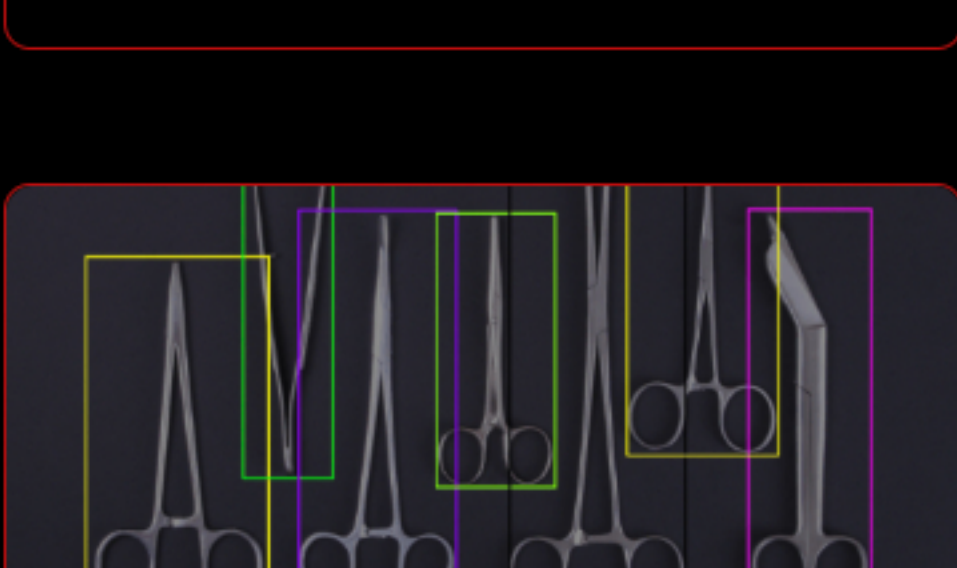

Seal Defect Detection

Examine and verify the seals on bottles/containers.

Smart Parking

Find and reserve parking spaces.

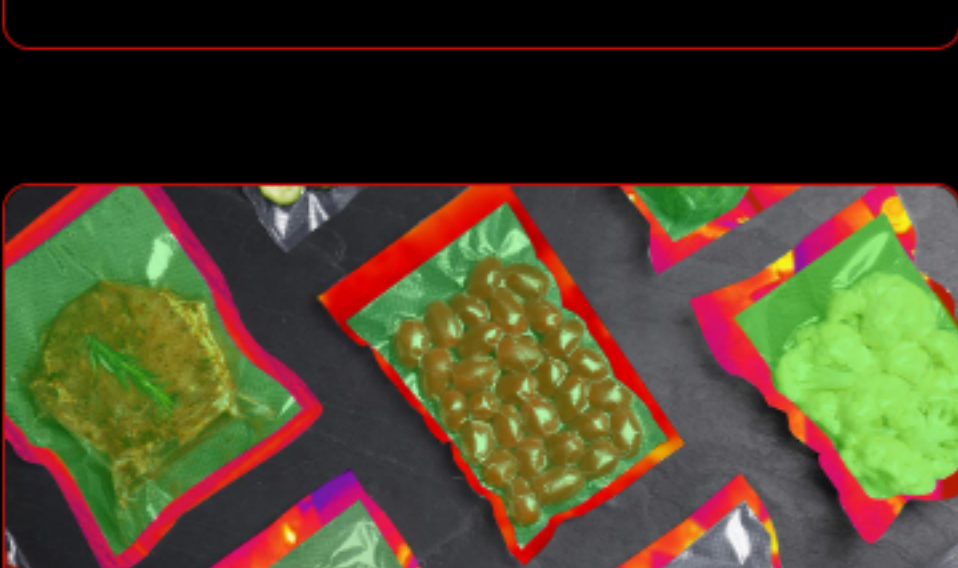

Surgical Instrument Tracking

Monitor and trace surgical instruments before and after surgical process.

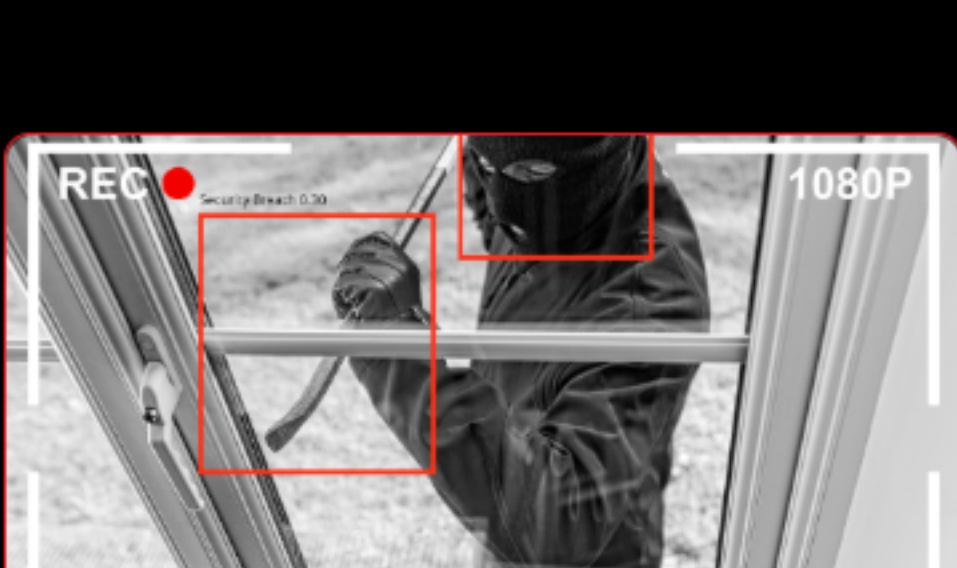

Tamper detection

Detecting tampering incidents involving FMCG products, their packaging, and labeling.

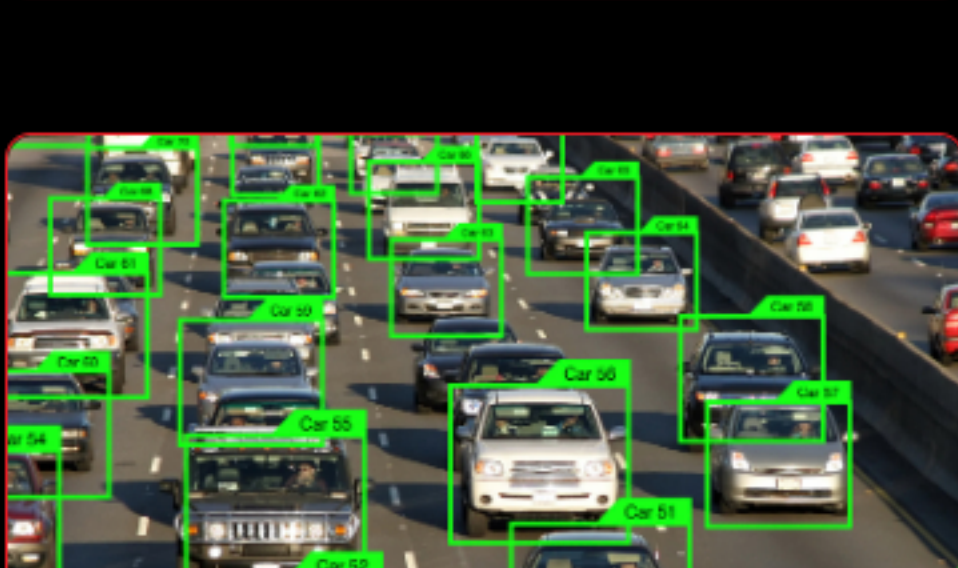

Thermal Seal Inspection

Evaluate the quality of thermal or heat seals on packaging.

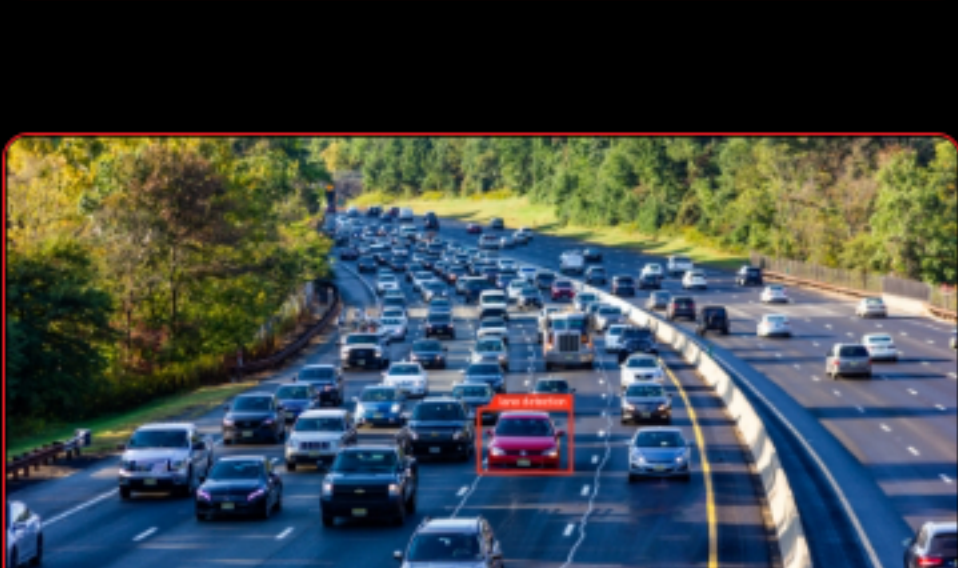

Threat Detection

Identify risks and suspicious activities that threaten public, organizations, or assets.

Traffic Counting

Automatically counts traffic such as vehicles, pedestrians, bicycles, etc.

Vehicle lane Detection

Track vehicle lane conformity with Vision AI

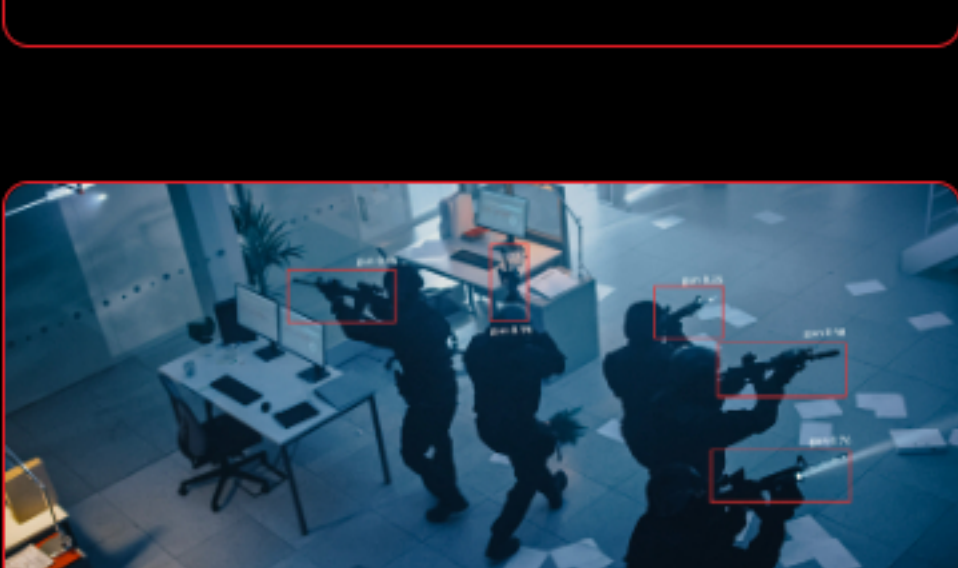

Vehicle Tracking

Improve transportation efficiency with real-time vehicle tracking.

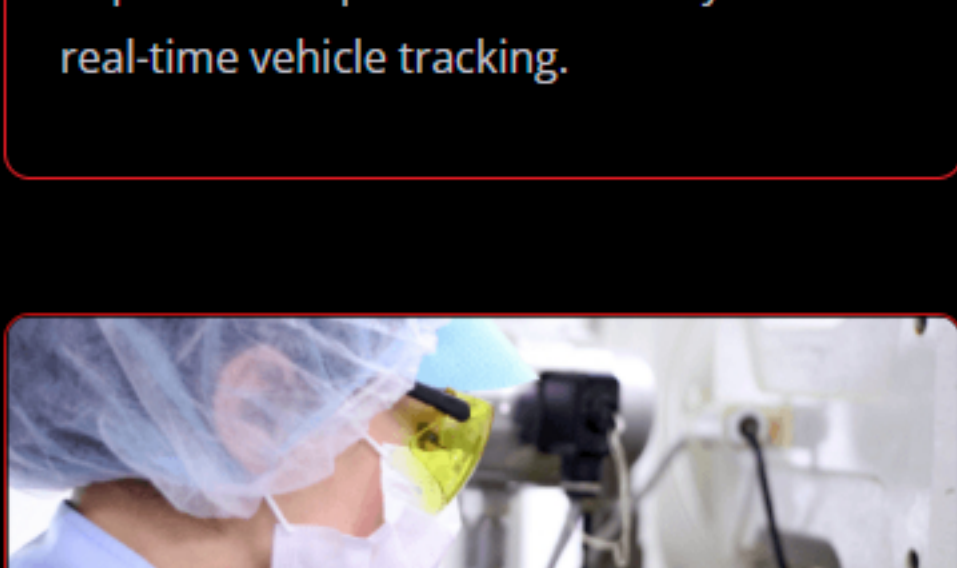

Vehicle Tracking and Monitoring

vehicle movements to ensure logistical efficiency and safety on site.

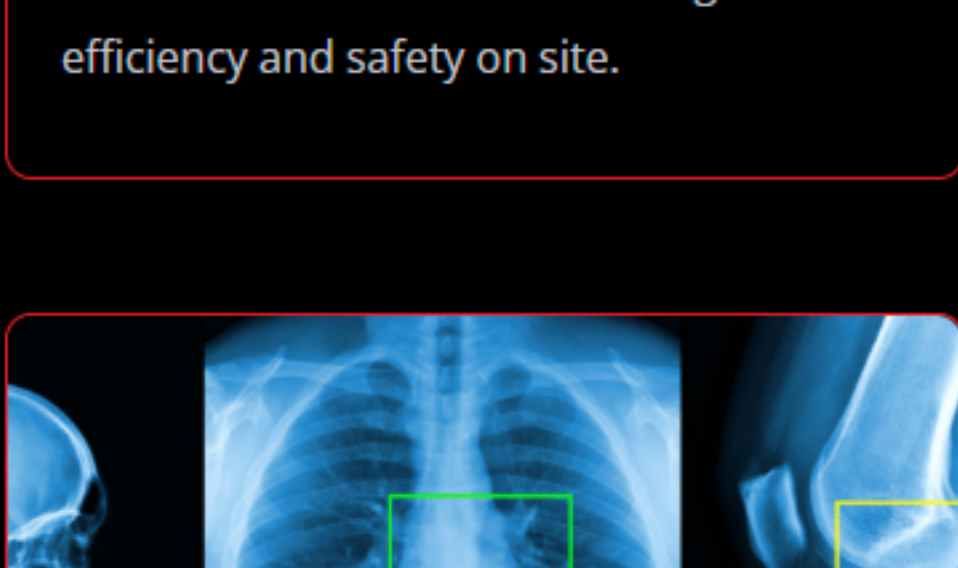

Weapon Detection

Detect firearms, knives, or other dangerous weapons in real time.

Worker Safety Monitoring

Monitor and track workplace safety with Vision AI real-time monitoring solutions.

X-ray Film Classification

Medical images analyzed and classified for diagnosis and treatment.
